PROJECT REPORT

Project Title : IoT based Smart Warehousing Robot Control with Mobile Application

Team Number : 4

Team Members : 1. Basil T. Abraham
2. Gautham Unnikrishnan
3. Kevin Joseph
4. Neeraj P. Raju

Branch : Robotics & Automation

Project Summary:

The autonomous warehouse robot is designed for efficient movement using QR codes. It is controlled by a mobile app and can move forward, backward, or turn left and right, with each direction marked by color-coded icons. The robot's movement is powered by two DC motors controlled by a motor driver IC. To move forward, both motors are rotated clockwise, and to move backward, they are rotated counterclockwise. Left or right turns need one motor to turn clockwise and the other counterclockwise. A power-off mode is also available for easy shutdown. Sensors have been added for added safety and efficient navigation.
